Clear

- UV Resistant
- VOC Compliant
- Polyurethane Coating

Colors

- White, Light Gray, Tile Red.
- Custom Colors Available.

Gel Patch 5000

White

- Surfacing & Fairing Compound.
- Fills Small Cracks And Pinholes.
- Non-Shrinking.
- Can Be Smoothed During Cure Time With Plastic Spreader.
- Compatible With All Polyurethane Finishing.

Marine Epoxy 100

Clear

Marine Epoxy 100-11

Marine Epoxy 100-100

All Colors Available

- Standard Cure --- 20 - 25 min.
- Fast Cure --- 10 - 15 min.
- Very Slow Cure --- 40 - 50 min.
- UV Resistant.

- Superior 2:1 Ratio Is Simple To Use.
- Superior "Wet Out" with Fiberglass Cloth and Most Fabrics.
- Superior Hard / Strong Bond to Polyester Resin.

Marine Epoxy 205

Colors

- Flame Retardant.
- UV Resistant.
- White, Black, Grey, Red.
- Custom Colors Available.
- Superior 4:1 Ratio Is Simple To Use.
- Superior "Wet Out" with Fiberglass Cloth and Most Fabrics.
- Superior Hard / Strong Bond to Polyester Resin.

Marine Epoxy 250

Clear

Marine Epoxy 250-11

Marine Epoxy 250-100

All Colors Available

- Standard Cure --- 20 - 25 min.
- Fast Cure --- 10 - 15 min.
- Very Slow Cure --- 40 - 50 min.
- UV Resistant.

- Superior 2:1 Ratio Is Simple To Use.
- Superior "Wet Out" with Fiberglass Cloth and Most Fabrics.
- Superior Flexibility and Bonding to Polyester Resin.

NORTHEAST MARINE EPOXY SYSTEMS®

Fiberglass

Offered in cloth sheets and tape rolls. Depending upon the need, either fiberglass product is the ideal material for marine repair. Purchase our light weight cloths when a smooth finish and an excellent waterproofing layer over wood or other surfaces is needed. Choose our heavier cloths when greater strength and overall rigidity are required. For small patching or joining 2 materials, our fiberglass tape rolls are the product you need.

Reinforcement and Shaping Fillers

Fillers are powdered materials added to an epoxy system to impart specific and desired physical characteristics depending upon the application used for the system. While each particular filler possesses its own unique set of physical attributes, their use in an epoxy system can be loosely placed into two general categories. High-density fillers are used in the manufacture of strong but hard to sand systems that are used mostly in structural applications like bonding, adhesion and reinforcement. Low-density fillers are used in light and easily sanded epoxy systems that are applied where it must be shaped, filled or faired because of cosmetic concerns.

Gemstone Quartz

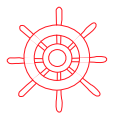

Also known as Chemstone Quartz, it comes in a variety of beautiful and attractive colors. For a beautiful, durable, seamless and economical floor material, add our Gemstone Quartz and pour a floor that wears like iron. Mix our basic colors in any combination you want to create the color of your choice and the perfect match for your project.
